

## Why test brain function?

- Many factors can contribute to cognitive decline, including normal aging, medication and some medical conditions.
- If cognitive decline is faster than expected, or causing problems with everyday tasks, we want to know.
- As some conditions are treatable or reversible, early identification matters. With early detection, more can be done to address memory loss and information processing difficulty. Waiting too long could be a missed opportunity.<sup>1</sup>

## Checking your brain health should be part of any annual routine exam

Information is power; the more you know, the more you can do to maintain your cognitive health.

Ask your doctor for more information and whether the Qr8 Cognition Suite™ is right for you.

Qr8 Cognition SUITE™ 

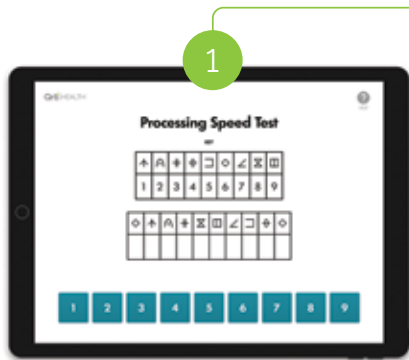

A quick and effective way to check memory and thinking

# What is the Qr8 Cognition Suite™?

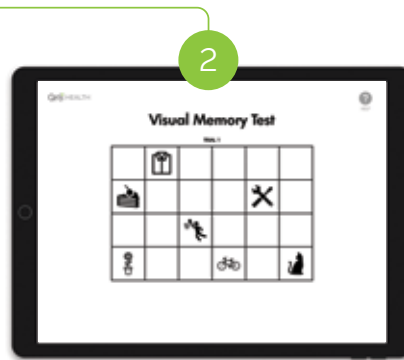

A screening tool to detect early signs of cognitive decline beyond normal aging<sup>2</sup>

A simple, user-friendly app containing two cognitive assessments:

## Processing Speed Test

Match numbers to symbols

## Visual Memory Test

Remember pictures and their location within a grid

Takes less than 15 minutes and most people find it easy to use.<sup>3</sup>

## Much more than a game

- Qr8 Cognition Suite can identify cognition issues early and is more sensitive than traditional screening tests.<sup>2</sup>
- Qr8 Cognition Suite assessments have been administered more than 1 million times worldwide.
- Your results will be compared to a database of hundreds of other results to assess whether your scores are within the normal range for people like you.<sup>4</sup>
- Complies with FDA guidances on cybersecurity and patient privacy so your results will only be known to you and your doctor.

High-Quality Results

Simple, Patient-Friendly Process

Secure, Documented Information
